About MSP360™ (CloudBerry) Backup for Windows 6.2.5

MSP360™ (CloudBerry) Backup for Windows 6.2.5 is a bug fix release, featuring improved performance. See the **Resolved Issues** section to get a closer look at the novelties. MSP360™ (CloudBerry) Backup is a cross-platform, cost-effective, flexible, and versatile backup and recovery solution that enables businesses and ordinary users to perform automatic backups to various cloud storage services. Advanced features like encryption, compression, and synthetic backups facilitate more efficient, swift, and secure file transfer between your local computer and the cloud. Ultimately, the result is an unmatched conflation of reliable backup, automatic scheduling, and highly customizable backup configuration.

Key benefits

- Cloud backup to Amazon S3, Glacier, Wasabi, Microsoft Azure, Google Cloud, OpenStack, Rackspace, and various other cloud storage services.
- Local backup to hard drives and NAS-like storage solutions.
- Encryption and compression for more secure and swift backups.
- Flexible backup & restore plans.
- Easy setup of backup plans with the ability to configure schedules, retention policy, and email notifications.
- Block-level backup for expedited upload.

Resolved Issues

The following table illustrates issues addressed in MSP360™ (CloudBerry) Backup for Windows 6.2.5.

Resolved Issue	Issue ID
Mandatory consistency check issue	8696
VMware restore: the application tries to used purged version of cbrevision	7558
Image-based backup plan issue in case of connection interruption	8671
VMware restore plan failure	5012
VMware backup plan issue on virtual machine size allocation	1581
Minor UI changes	8827

System Requirements

Before installing MSP360™ (CloudBerry) Backup for Windows 6.2.5, make sure that your computer meets the following requirements:

Component	Requirement
CPU	1.4 GHz 64-bit processor
RAM	512 Mb
Disk Space	100 Mb or more
Operating System	Windows 7/8/10 or Windows Server 2008/2012/2016

Getting Started

Installation Instructions

1. Download the universal installer from MSP360™ website.
2. Run the Windows installer. If some required software frameworks are missing, the installer will prompt you to fix it.
3. Follow the installation wizard steps. To learn more, refer to the Installation section of the [help documentation](#).
4. Upon the first launch, select the licensing option.
5. Once all is set, you can begin configuring backup & restore plans.
